

Google Flow & Gemini Omni: Incremental Storytelling Workshop

Part I tests isolated prompt levers in Google Flow; Part II builds a 30s commercial with @Maya & @Leo.

Part I · Sandbox

- Labs A–D in Flow
- Camera Angles
- 7500K vs 2400K
- Visual Styles
- Multi-Object Physics

[Prompt Sandbox ↗](#)

Steps 1–2 · Cast

- 2-Sentence Seed
- 5-Shot Beat Sheet
- Create @Maya Once
- Create @Leo Once
- Lock Voice + Face

[Step 1–2 Guide ↗](#)

Step 3 · Board

- Nano Banana Pro
- Prompt Only with @Maya & @Leo
- More > Add to Prompt
- Start/End Frames

[Step 3 Guide ↗](#)

Step 4 · Omni

- Video > Omni Flash
- @Character + @Voice
- Video > Frames
- 180° Dialogue Rule
- 360p -> 720p Free

[Step 4 Guide ↗](#)

Step 5 · Cut

- 3-Turn Video Edit
- Conversational Relighting
- Kinetic Brand Text
- Scenebuilder Export

[Prompt Library ↗](#)

100% Real Google Flow Workspace: Create @Characters Once -> Refer by @Name -> Animate & Edit in Gemini Omni Flash!

How Google Flow Works: Sandbox Testing + Incremental Layering

Test isolated levers first; then create @Characters once and build your commercial scene by scene.

The 'Re-Generation' Trap (What Fails)

- Writing a huge paragraph that re-describes your hero's face and outfit in every prompt.
- Result: Google Flow generates a brand-new person in every clip!

[See Slide 08 Fix ↗](#)

Part I: Prompt Sandbox (Labs A–D, 25 Min)

- Hold the subject constant and test ONE variable per prompt.
- Master Camera Angles, Kelvin Warmth, Visual Styles, and Physics in Omni Flash.

[Open Sandbox Labs ↗](#)

Part II: Create Once, Refer with @Name

- Create @Maya & @Leo ONCE in Characters > New Character.
- In every scene prompt, just type '@Maya drinks coffee'—face, outfit & voice stay locked!

[Open Student Labs ↗](#)

Golden Rule: Never re-describe a saved character in Google Flow—create @Maya once and only refer to @Maya!

Sandbox Labs A & B: Camera Angles & Kelvin Lighting Warmth

Keep the subject constant in Google Flow and test extreme camera geometry and color temperature.

Lab A: Camera Angles & Motion (A.1 – A.4)

- A.1 Worm's-Eye Low Angle (14mm lens looking straight up)
- A.2 90° Overhead Flat-Lay (geometric tabletop symmetry)
- A.3 Single-Take Whip-Pan to Macro (Omni Flash, 6s)
- A.4 1-Turn Video Edit: 'Change to slow 180° eye-level orbit'

Lab B: Kelvin Warmth & Relighting (B.1 – B.4)

- B.1 Cold 7500K Blue-Hour Isolation (5:45 AM pre-dawn)
- B.2 Warm 2400K Golden Sunrise Breakthrough (amber rim light)
- B.3 8s Real-Time Cold-to-Warm Lighting Shift (Omni Flash)
- B.4 1-Turn Video Edit: 'Change lighting to 2200K candlelight'

Copy-Paste in Google Flow (Video > Omni Flash, 6s–8s, Omni 360p)

[Copy Labs A & B ↗](#)

[LAB A.3 - Whip-Pan]: Dynamic camera starting in a wide shot of a sunlit cafe, then executing a fast whip-pan right and dolly-in to an extreme macro close-up of dark espresso pouring into a matte terracotta cup, golden crema swirling, realistic steam rising.

[LAB B.3 - Sunrise Shift]: Fixed-tripod medium shot of an architect's desk by a rain-streaked window. Over 8s, lighting transitions smoothly from cold 7500K blue pre-dawn shadows into warm 2400K golden sunrise beams illuminating a steaming terracotta cup.

Pro Tip: Test prompts in 'Omni 360p' at half the credit cost, then click 'Upscale to 720p' for 0 credits!

Sandbox Labs C & D: Visual Styles, Multi-Object Lock & Physics

Swap artistic mediums on the same scene and test 5-object spatial locks and kinetic typography in Omni Flash.

Lab C: Visual Style Transfer (C.1 – C.3)

- C.1 35mm Anamorphic Film (Kodak Vision3, halation, grain)
- C.2 12fps Stop-Motion Clay & Felt Diorama (Omni Flash, 6s)
- C.3 Architectural Fountain-Pen Ink & Watercolor Wash
- Same action (barista pouring latte art), 3 tactile worlds!

Lab D: Combining Objects & Physics (D.1 – D.3)

- D.1 5-Object Tabletop Lock (Cup, Calipers, Blueprint, Glasses, Rosemary)
- D.2 Rube Goldberg Espresso Chain Reaction (Omni Flash, 8s)
- D.3 In-Video Kinetic Text: 'AWAKEN THE CRAFT' in rising steam

Copy-Paste in Google Flow (Video > Omni Flash, 6s)

[Copy Labs C & D ↗](#)

[LAB C.2 - Stop-Motion]: Handcrafted stop-motion animation at 12 frames per second of a miniature clay barista pouring cotton-wool steam and glossy resin espresso into a tiny terracotta clay mug on a balsa-wood counter, visible thumbprints on the clay.

[LAB D.3 - Kinetic Text]: Close-up of a steaming matte terracotta cup embossed with 'SOLIS' in golden sunlight. As translucent white steam rises, clean minimalist gold serif typography reading 'AWAKEN THE CRAFT' forms naturally above the cup.

Takeaway: Specify tactile material nouns ('cotton-wool steam', 'balsa-wood') and explicit left/center/right anchors.

Why We Use Gemini Omni Flash in Google Flow

One unified model in Google Flow for @Character locks, Ingredients/Frames, Voice dialogue, and 3-turn video edits.

1. Native @Character, @Voice & Image Ingredients

Type @Maya or @Leo in the prompt box (with bundled character voices!) and attach existing scene/prop images via More > Add to Prompt or Video > Ingredients.

[Flow Cheat Sheet ↗](#)

2. Flexible 4s-10s Clips & 360p -> 720p Upscale

Generate 4s, 6s, 8s, or 10s clips in 16:9 or 9:16. Prototype in Omni 360p at half the credit cost, then click Upscale to 720p for 0 credits on your winning takes.

[Open Google Flow ↗](#)

3. Start/End Frames & Save Frame Chaining

Attach + Add start frame and + Add end frame in Video > Frames for exact motion transitions, or pause any clip and click Save frame to chain the next shot.

[Step 4 Video Labs ↗](#)

4. 3-Turn Conversational Video Editing

Select any Omni Flash clip (up to 10s) to conversationally change camera angles, relight to golden hour, or add brand titles across up to 3 turns.

[Step 5 Edit Labs ↗](#)

All video generation, dialogue lip-sync, ambient SFX, and conversational edits in this workshop run on Omni Flash!

Step 1: Start With a 2-Sentence Story & 5-Shot Beat Sheet

Use the built-in Google Flow Agent to turn a 2-sentence story into a 5-shot commercial plan.

The 2-Sentence Story Seed ('Solis — The 6AM Spark')

"At 5:45 AM on a rainy morning, exhausted architect Maya stares at a blank blueprint in her cold studio until she walks into a warm cafe where barista Leo slides her a steaming terracotta cup of Solis coffee. One sip sparks her creativity."

The 5-Shot Commercial Beat Sheet (30s Total)

- Shot 1 (6s): @Maya stuck at desk in cold rainy studio (7000K)
- Shot 2 (6s): @Maya enters warm cafe out of the rain (2700K)
- Shot 3 (6s): @Leo pours & slides terracotta cup across counter
- Shot 4 (6s): @Leo speaks -> Shot 5 (6s): @Maya sips & replies

Copy-Paste Prompt 1.1 – Run in the Google Flow Agent Panel

[Copy Prompt 1.1 ↗](#)

We are creating a 30-second commercial in Google Flow for 'Solis Artisan Coffee' titled 'The 6:00 AM Spark.'

Story Seed: At 5:45 AM on a rainy morning, exhausted architect Maya stares at a blank blueprint in her cold studio until she walks into a warm neighborhood cafe where barista Leo slides her a steaming terracotta cup of Solis coffee. One sip sparks her creativity.

Break this story into a concise 5-shot beat sheet listing: Shot #, Setting, Characters (@Maya/@Leo), Action & Lighting Shift.

Step 1 Deliverable: A clear 5-shot beat sheet where emotional change is visually driven by Cold Blue -> Warm Gold.

Step 2: Create Characters Once in Characters > New Character

Lock each character's visual appearance, name, and voice ONCE—never re-describe their appearance again!

1. Open Characters > New Character

- In the left sidebar of Google Flow, click Characters -> New Character.
- Enter the detailed physical description ONE time under neutral 5600K studio light and click Generate.

[Official Flow Docs ↗](#)

2. Name & Attach Character Voice

- Name your characters 'Maya' and 'Leo'.
- Click Select a voice -> pick Warm Alto for Maya & Warm Baritone for Leo -> click Add to Character -> Done.

[Step 2 Prompts ↗](#)

3. Refer ONLY by @Maya and @Leo

- In every storyboard and video prompt from now on, simply type @Maya or @Leo!
- Example: '@Maya drinks coffee and smiles.'
- Flow keeps her face, glasses, cardigan & voice!

[See Side-by-Side ↗](#)

Google Flow Character Rule: Describe once in 'New Character' -> Reference everywhere else using only '@Maya' & '@Leo'!

Live Lab: Creating @Maya Once vs. The 'Re-Generation' Mistake

Once @Maya and @Leo are created, your scene prompts should only describe their actions—never their faces!

WRONG: Re-Describing Maya in Scene Prompts

"A 29-year-old Latina architect with olive skin, freckles, raven hair in a clip, tortoiseshell glasses, and an ochre cardigan drinks coffee..."

-> Forces Google Flow to re-generate a DIFFERENT woman every shot!

RIGHT: Referencing @Maya in Scene Prompts

1. Create Maya once in Characters > New Character.

2. In Shots 1–5, only type:

"@Maya drinks coffee from the terracotta cup, inhales the warm steam, and smiles."

-> 100% locked face, glasses, cardigan, and voice!

One-Time Creation Prompts (Run ONCE in Left Sidebar > Characters > New Character)

[Copy @Maya & @Leo ↗](#)

[CREATE @Maya ONCE (Voice: Warm Alto)]: 29-year-old Latina architect with warm olive skin, subtle freckles across the nose, wavy raven hair pinned in a low clip, round tortoiseshell eyeglasses, mustard-ochre ribbed knit cardigan over white crew-neck tee.
[CREATE @Leo ONCE (Voice: Warm Baritone)]: 42-year-old artisan barista with medium-brown skin, silver-flecked short curly hair, neatly trimmed beard, warm smile lines, wearing a washed indigo denim apron over a charcoal henley with rolled sleeves.

Lab Check: Confirm both '@Maya' and '@Leo' appear in your Characters tab with their Voices attached before moving on!

How Scene & Object References Actually Work in Google Flow

Only Characters (@Maya, @Leo) and Voices (@Voice) use @ tags—attach scene & prop images via Add to Prompt or Frames!

1. More (:) > Add to Prompt

- Google Flow's sidebar has All media, Images, Videos, Characters, Scenes & Uploads (no @Object creator!).
- Hover over any image tile and click More (:) -> Add to Prompt (or drag it into the prompt box) to reuse that room or prop!

[Official Flow Docs ↗](#)

2. Video > Frames (Start & End Frame)

- In Video > Omni Flash, switch to Frames and attach your storyboard image to + Add start frame (and + Add end frame).
- Omni Flash animates directly from your exact cafe & terracotta cup image!

[Official Flow Docs ↗](#)

3. Pause Video > Click 'Save frame'

- Want your next shot to pick up on the exact same counter and cup?
- Pause any generated video clip on a frame, click Save frame, and attach that saved image to your next prompt!

[Flow Cheat Sheet ↗](#)

Verified Flow Rule: Use '@Maya' & '@Leo' for people, and 'More > Add to Prompt' or '+ Add start frame' for sets & props!

Step 3: Build Storyboard Images Using @Maya, @Leo & Add to Prompt

Generate 5 storyboard images in Nano Banana Pro—using More > Add to Prompt to lock the cafe & terracotta cup!

Images 3.1 & 3.2: Studio Block -> Cafe Arrival

- Image 3.1: @Maya at her birchwood drafting desk in the cold 7000K rainy studio.
- Image 3.2: @Maya stepping inside the warm 2700K coffee shop out of the rain.

Images 3.3 – 3.5: Chain Cafe & Cup via 'Add to Prompt'

- Image 3.3 (Start Frame): @Leo pouring espresso into the matte terracotta 'SOLIS' cup.
- Click More > Add to Prompt on Image 3.3 to generate Image 3.4 (End Frame: cup slid to @Maya) & Image 3.5 (@Maya's sip)!

Copy-Paste Storyboard Prompts 3.1 – 3.5 (Image > Nano Banana Pro, 16:9)

[Copy Step 3 Prompts ↗](#)

[Image 3.1]: @Maya sitting at a birchwood drafting desk in an architectural studio loft at 5:45 AM, blank white blueprint, 7000K blue light.

[Image 3.2]: @Maya stepping inside a warm artisan coffee shop out of the rain, looking toward a reclaimed oak espresso counter, 2700K.

[Image 3.3 Start]: @Leo behind the oak counter in the warm cafe, pulling espresso from the brass machine into a matte terracotta 'SOLIS' cup.

[Image 3.4 End (Add 3.3 to Prompt)]: Close-up on the oak counter as @Leo's hand slides the steaming terracotta 'SOLIS' cup in front of @Maya.

By clicking 'More > Add to Prompt' on Image 3.3, Image 3.4 & 3.5 keep the exact same oak counter and terracotta cup!

Step 4A: Animate Shots in Google Flow (Video > Omni Flash)

Attach Images 3.1–3.4 in Video > Frames (+ Add start/end frame) or Video > Ingredients to animate Shots 1–3.

Clips 4.1 & 4.2: Attach Start Frame or Ingredients

- Select Video > Omni Flash (6s, Omni 360p draft).
- Attach Image 3.1 as + Add start frame for Shot 1 (Studio) and Image 3.2 as + Add start frame for Shot 2 (Cafe Arrival).

Clip 4.3: Frames Mode (Start Frame -> End Frame)

- In Video > Frames, attach Image 3.3 to + Add start frame and Image 3.4 to + Add end frame.
- Omni Flash smoothly interpolates @Leo pouring espresso and sliding the terracotta cup to @Maya!

Copy-Paste Video Prompts 4.1 – 4.3 (Video > Omni Flash, 6s)

[Copy Step 4A Prompts ↗](#)

[Clip 4.1 - Shot 1 (Start Frame 3.1)]: Slow push-in medium shot of @Maya sitting at the drafting desk in the cold rainy studio, rubbing her temple and tapping her charcoal pencil against the blank white blueprint while rain patters against the window.

[Clip 4.2 - Shot 2 (Start Frame 3.2)]: Smooth tracking shot following @Maya as she walks into the warm coffee shop out of the rain.

[Clip 4.3 - Shot 3 (Start 3.3 + End 3.4)]: Smooth tilt as @Leo finishes pouring into the terracotta cup and slides it to @Maya.

Pro Tip: Pause any clip on its final frame and click 'Save frame' to use it as the '+ Add start frame' for your next shot!

Step 4B: Directing Two-Character Dialogue (@Leo & @Maya)

In Video > Ingredients, reference @Leo & @Maya (with their bundled voices) plus your cafe image!

Clip 4.4 — Shot 4: @Leo Speaks (Looking Left)

- In Video > Ingredients, type @Leo and @Maya and attach Image 3.4 as a location/prop ingredient.
- Over-the-shoulder from behind @Maya on the left; @Leo on the right speaks in his bundled Warm Baritone voice!

Clip 4.5 — Shot 5: @Maya Drinks Coffee & Replies

- In Video > Ingredients, type @Maya and attach Image 3.5 (or use Image 3.5 as + Add start frame).
- Reverse-angle of @Maya on the left looking screen-right: @Maya drinks coffee from the terracotta cup and replies!

Copy-Paste Dialogue Prompts 4.4 & 4.5 (Video > Omni Flash, 6s)

[Copy Step 4B Prompts ↗](#)

[Clip 4.4 - Shot 4 (Ingredients: @Leo, @Maya + Image 3.4)]: Over-the-shoulder medium shot from behind @Maya on the left, focusing on @Leo on the right looking screen-left across the oak counter with a warm smile. @Leo says: "Rough night with the blueprints? Start with this."

[Clip 4.5 - Shot 5 (Ingredients: @Maya + Image 3.5)]: Reverse-angle medium close-up of @Maya on the left looking screen-right at the oak counter. @Maya drinks coffee from the terracotta cup, lowers the cup with a warm smile, and says: "You just saved the whole skyline, Leo."

[Look at Clip 4.5: '@Maya drinks coffee from the terracotta cup... and says: ...' — 100% real Google Flow workflow!](#)

Step 5: Omni Conversational Video Editing & Scenebuilder

Refine Clip 4.5 across 2 conversational turns in Omni Flash, then assemble & export in Scenebuilder.

Omni Conversational Video Edit (Up to 3 Turns)

- Select Clip 4.5 and open the conversational edit box.
- Turn 1: Intensify the warm 2400K golden sunrise beams.
- Turn 2: Fade in gold serif text 'SOLIS – AWAKEN THE CRAFT' in the rising steam—without losing @Maya's performance!

Assemble & Export in Google Flow Scenebuilder

- Hover over Clips 4.1–4.5 -> More (:) -> Add to Scene.
- Open Scenebuilder (Scenes) to order Shots 1–5 and trim dialogue handles.
- Click Upscale to 720p (0 credits) on all clips and Download!

Copy-Paste Conversational Edit Prompts 5.1 & 5.2 (Omni Flash Video Edit)

[Copy Step 5 Prompts ↗](#)

[Edit 5.1 - Turn 1 (Relight Clip 4.5)]: Intensify the warm 2400K golden sunrise beams streaming through the cafe window behind @Maya and make the rising coffee steam glow softly in the backlight.
[Edit 5.2 - Turn 2 (Brand Title Overlay)]: In the final 2 seconds as the steam rises, fade in clean minimalist gold serif text in the upper center reading 'SOLIS – AWAKEN THE CRAFT'.

All previous versions of edited clips remain safe in your Google Flow 'History' panel!

Recap: The 5 Golden Rules of Google Flow & Gemini Omni

Everything we built today—plus 2 bonus commercial packs—is ready to clone in the GitHub repository.

Rules 1 & 2: @Characters & Images

1. Create @Maya & @Leo ONCE in Characters > New Character (with Voice) and only refer to @Maya & @Leo.
2. Attach scene/prop images via More > Add to Prompt or + Add start frame!

[Flow Cheat Sheet ↗](#)

Rules 3 & 4: Frames & Omni Edit

3. Prototype in Omni 360p, use Start/End Frames & Save frame, and upscale to 720p for 0 credits.
4. Use 3-turn Video Editing instead of re-rolling good acting!

[Solis Prompt Library ↗](#)

Rule 5: Explore the GitHub Repository

- Part I Sandbox (Labs A–D)
- Part II Solis Coffee Prompts
- Bonus: NovaPay & Kuntur
- Interactive Web Companion
- 14-Slide Deck & PDF

[Open GitHub Repo ↗](#)
